# \$ man runcon.1

RUNCON(1)

**User Commands** 

RUNCON(1)

NAME

runcon - run command with specified security context

### **SYNOPSIS**

runcon CONTEXT COMMAND [args]

runcon [ -c ] [-u USER] [-r ROLE] [-t TYPE] [-l RANGE] COMMAND [args]

# **DESCRIPTION**

Run COMMAND with completely-specified CONTEXT, or with current or transitioned security context modified by one or more of LEVEL, ROLE, TYPE, and USER.

If none of -c, -t, -u, -r, or -l, is specified, the first argument is used as the complete context. Any additional arguments after COMMAND are interpreted as arguments to the com?

Note that only carefully-chosen contexts are likely to successfully run.

Run a program in a different SELinux security context. With neither CONTEXT nor COMMAND, print the current security context.

Mandatory arguments to long options are mandatory for short options too.

#### CONTEXT

Complete security context

-c, --compute

compute process transition context before modifying

-t, --type=TYPE

type (for same role as parent)

-u, --user=USER Page 1/2

user identity

-r, --role=ROLE

role

-I, --range=RANGE

levelrange

- --help display this help and exit
- --version

output version information and exit
