$ man sbkeysync.1

SBKEYSYNC(1)   User Commands   SBKEYSYNC(1)

NAME

    sbkeysync - UEFI secure boot key synchronization tool

SYNOPSIS

    sbkeysync [options]

DESCRIPTION

    Update EFI key databases from the filesystem

OPTIONS

    --efivars-path <dir>

        Path to efivars mountpoint (or regular directory for testing)

    --verbose

        Print verbose progress information

    --dry-run

        Don't update firmware key databases

    --pk   Set PK

    --keystore <dir>

        Read keys from <dir>/{db,dbx,KEK}/* (can be specified multiple times, first dir

        takes precedence)

    --no-default-keystores

        Don't read keys from the default

        keystore dirs
