Rocky Enterprise Linux 9.2 Manual Pages on command 'shotwell.1'

$ man shotwell.1

shotwell(1)   General Commands Manual   shotwell(1)

NAME

    shotwell - Digital photo manager

SYNOPSIS

    shotwell [OPTION]... [FILE]

DESCRIPTION

    Shotwell is a digital photo organizer designed for the GNOME desktop environment. It al?

    lows you to import photos from disk or camera, organize them in various ways, view them in

    full-window or fullscreen mode, and export them to share with others.

OPTIONS

    -h, --help Show help options

    -d, --datadir=DIRECTORY

        Path to Shotwell's private data

    --no-runtime-monitoring

        Do not monitor library directory at runtime for changes

    -f, --fullscreen

        Open the viewer mode in fullscreen. Has no effect in library mode.

    --no-startup-progress

        Don't display startup progress meter

    -V, --version

        Show the application's version

    --display=DISPLAY

        X display to use

EXAMPLES

    shotwell

        Opens Shotwell with the user's library.

    shotwell FILE

        Opens an image file for direct editing. File is not imported into library and un?

        saved changes are lost on close.
