Rocky Enterprise Linux 9.2 Manual Pages on command 'showconsolefont.8'

$ man showconsolefont.8

SHOWCONSOLEFONT(8)   System Manager's Manual   SHOWCONSOLEFONT(8)

NAME

    showconsolefont - Show the current EGA/VGA console screen font

SYNOPSIS

    showconsolefont [-V | --version] [-v] [-i] [-C console]

DESCRIPTION

    The showconsolefont command outputs the current console font to stdout. The option -v

    prints additional information, while the option -V prints the program version number. The

    option -i doesn't print out the font table, just shows ROWSxCOLSxCOUNT and exits. On

    Linux 2.6.1 and later, the option -C allows one to indicate the console involved. Its ar?

    gument is a pathname.
