**\$ man showrgb.1**

SHOWRGB(1)                      General Commands Manual                      SHOWRGB(1)

**NAME**

showrgb - display an rgb color-name database

**SYNOPSIS**

showrgb [ database ]

**DESCRIPTION**

The showrgb program reads an rgb color-name database from a text file and converts it back to source form, printing the result to standard output. The default database is the one that X was built with, and may be overridden on the command line. Specify the database name without the .txt, .pag or .dir suffix.

**FILES**

/usr/share/X11/rgb default database.

X Version 11                      rgb 1.0.6                      SHOWRGB(1)
