Rocky Enterprise Linux 9.2 Manual Pages on command 'systemd-hwdb.8'

\$ man systemd-hwdb.8

SYSTEMD-HWDB(8) systemd-hwdb SYSTEMD-HWDB(8)

NAME

systemd-hwdb - hardware database management tool

SYNOPSIS

systemd-hwdb [options] update
systemd-hwdb [options] query modalias

DESCRIPTION

systemd-hwdb expects a command and command specific arguments. It manages the binary hardware database.

OPTIONS

--usr
 Generate in /lib/udev instead of /etc/udev.
-r, --root=PATH
 Alternate root path in the filesystem.
-s, --strict
 When updating, return non-zero exit value on any parsing error.
-h, --help
 Print a short help text and exit.

systemd-hwdb [options] update

 Update the binary database.

systemd-hwdb [options] query [MODALIAS]

 Query database and print result.
