Rocky Enterprise Linux 9.2 Manual Pages on command 'ubuntu-distro-info.1'

\$ man ubuntu-distro-info.1

UBUNTU-DISTRO-INFO(1) General Commands Manual UBUNTU-DISTRO-INFO(1)

NAME

ubuntu-distro-info - provides information about Ubuntu's distributions

SYNOPSIS

ubuntu-distro-info [OPTIONS]

OPTIONS

--date=DATE

date for calculating the version (default: today)

-h, --help

display help message and exit

-a, --all

list all known versions

-y[MILESTONE], --days[=MILESTONE]

display number of days until specified version reaches the specified milestone.

MILESTONE may be one of created, release, eol, or eol-server. If no milestone is specified, assume release. For options that return a list, display the normal out?

put followed by whitespace and the number of days until the specified milestone.

If milestone cannot be calculated (for example if the eol-server milestone is spec?

ified for a non-server release), the string '(unknown)' is displayed. Unless one

of -c, -f or -r is specified, only the number of days will be displayed.

-d, --devel

latest development version

-l, --latest

prints the latest development version. In case of outdated distribution data, the latest stable version will be printed.

--lts latest long term support (LTS) version

--series=SERIES

series to calculate the version for

-s, --stable

latest stable version

--supported

list of all supported versions, including the development release

--supported-esm

list of all Ubuntu Advantage supported stable versions

--unsupported

list of all unsupported stable versions

-c, --codename

print the codename (default)

-r, --release

print the release version

-f, --fullname

print the full name
