Rocky Enterprise Linux 9.2 Manual Pages on command 'update-locale.8'

$ man update-locale.8

UPDATE-LOCALE(8)   System Manager's Manual   UPDATE-LOCALE(8)

NAME

    update-locale - Modify global locale settings

SYNTAX

    update-locale [OPTIONS] [var=locale | var] [...]

DESCRIPTION

    This program can be called by maintainer scripts when Debian packages are installed or re?

    moved, it updates the /etc/default/locale file to reflect changes in system configuration

    related to global locale settings. When variables have no value assigned, they are re?

    moved from the locale file. Some basic checks are performed to ensure that requested set?

    tings are valid.

OPTIONS

    --help Display an help message and exit.

    --reset

        Variables which are not set on command-line are cleared out.

    --locale-file FILE

        Define file containing locale variables. (Default: /etc/default/locale)

    --no-checks

        Do not perform sanity checks on locale variables.

EXAMPLE

    The command

        update-locale LANG=en_CA.UTF-8 LANGUAGE

    sets LANG to en_CA.UTF-8 and removes definitions for LANGUAGE.

FILES

    /etc/default/locale

        File where global locale settings are stored.
