Rocky Enterprise Linux 9.2 Manual Pages on command 'which.debianutils.1'

$ man which.debianutils.1

WHICH(1)   General Commands Manual   WHICH(1)

NAME

    which - locate a command

SYNOPSIS

    which [-a] filename ...

DESCRIPTION

    which returns the pathnames of the files (or links) which would be executed in the current

    environment, had its arguments been given as commands in a strictly POSIX-conformant

    shell.   It does this by searching the PATH for executable files matching the names of the

    arguments. It does not canonicalize path names.

OPTIONS

    -a   print all matching pathnames of each argument

EXIT STATUS

    0   if all specified commands are found and executable

    1   if one or more specified commands is nonexistent or not executable

    2   if an invalid option is specified
