Rocky Enterprise Linux 9.2 Manual Pages on command 'wmdocker.1'

$ man wmdocker.1

WMDOCKER(1)   General Commands Manual   WMDOCKER(1)

NAME

    wmdocker - System tray for KDE3/GNOME2 docklet applications

SYNOPSIS

    wmdocker [options]

DESCRIPTION

    This manual page documents briefly the wmdocker command. This manual page was written for

    the Debian distribution because the original program does not have a manual page.

    wmdocker is a docking application (WindowMaker dock app) which acts as a system tray for

    KDE3 and GNOME2. It can be used to replace the panel in either environment, allowing you

    to have a system tray without running the KDE/GNOME panel.

    Docker was written and designed to work with Openbox 2, but it should work fine in any

    window manager that supports WindowMaker dock apps.

OPTIONS

    -h-help

        Show summary of options.

    -display DISPLAY

        The X display to connect to.

    -border N

        The width of the border to put around the system tray icons. Defaults to 1.

    -vertical

        Line up the icons vertically. Defaults to horizontally.

    -wmaker

WindowMaker mode. This makes wmdocker a fixed size (64x64) to appear nicely in in WindowMaker. Note: In this mode, you have a fixed number of icons that wmdocker can hold.

-iconsize SIZE

The size (width and height and height) to display icons as in the system tray. De? faults to 24.

-color COLOR

The background color to use for the tray. Defaults to whatever color the window manager specifies.

AUTHOR

This manual page was written by Ari Pollak <ari@debian.org>, for the Debian GNU/Linux sys? tem (but may be used by others).
