$ man xclipboard.1

XCLIPBOARD(1)   General Commands Manual   XCLIPBOARD(1)

NAME

xclipboard - X clipboard client

SYNOPSIS

xclipboard [-toolkitoption ...] [-w] [-nw]

DESCRIPTION

The xclipboard program is used to collect and display text selections that are sent to the

CLIPBOARD by other clients. It is typically used to save CLIPBOARD selections for later

use.   It stores each CLIPBOARD selection as a separate string, each of which can be se?

lected. Each time CLIPBOARD is asserted by another application, xclipboard transfers the

contents of that selection to a new buffer and displays it in the text window. Buffers

are never automatically deleted, so you'll want to use the delete button to get rid of

useless items.

Since xclipboard uses a Text Widget to display the contents of the clipboard, text sent to

the CLIPBOARD may be re-selected for use in other applications. xclipboard also responds

to requests for the CLIPBOARD selection from other clients by sending the entire contents

of the currently displayed buffer.

An xclipboard window has the following buttons across the top:

quit   When this button is pressed, xclipboard exits.

delete When this button is pressed, the current buffer is deleted and the next one dis?

        played.

new   Creates a new buffer with no contents. Useful in constructing a new CLIPBOARD se?

        lection by hand.

save   Displays a File Save dialog box. Pressing the Accept button saves the currently

   displayed buffer to the file specified in the text field.

next   Displays the next buffer in the list.

previous

   Displays the previous buffer.

OPTIONS

   The xclipboard program accepts all of the standard X Toolkit command line options as well

   as the following:

   -w   This option indicates that lines of text that are too long to be displayed on one

      line in the clipboard should wrap around to the following lines.

   -nw   This option indicates that long lines of text should not wrap around. This is the

      default behavior.

WIDGETS

   In order to specify resources, it is useful to know the hierarchy of the widgets which

   compose xclipboard. In the notation below, indentation indicates hierarchical structure.

   The widget class name is given first, followed by the widget instance name.

   XClipboard xclipboard

      Form form

            Command Quit

            Command delete

            Command new

            Command Save

            Command next

            Command prev

            Label index

            Text text

      TransientShell fileDialogShell

            Dialog fileDialog

                  Label label

                  Command accept

                  Command cancel

                  Text value

      TransientShell failDialogShell

Dialog failDialog

                           Label label

                           Command continue

SENDING/RETRIEVING CLIPBOARD CONTENTS

    Text is copied to the clipboard whenever a client asserts ownership of the CLIPBOARD se?

    lection. Text is copied from the clipboard whenever a client requests the contents of the

    CLIPBOARD selection. Examples of event bindings that a user may wish to include in a re?

    source configuration file to use the clipboard are:

    *VT100.Translations: #override \

        <Btn3Up>:   select-end(CLIPBOARD) \n\

        <Btn2Up>:   insert-selection(PRIMARY,CLIPBOARD) \n\

        <Btn2Down>:   ignore ()

SEE ALSO

    X(7), xcutsel(1), xterm(1), individual client documentation for how to make a selection

    and send it to the CLIPBOARD.

ENVIRONMENT

    DISPLAY to get the default host and display number.

    XENVIRONMENT

        to get the name of a resource file that overrides the global resources stored in

        the RESOURCE_MANAGER property.

FILES

    /etc/X11/app-defaults/XClipboard

        specifies required resources
