***Rocky Enterprise Linux 9.2 Manual Pages on command 'xfs\_scrub\_all.8'***

***\$ man xfs\_scrub\_all.8***

xfs\_scrub\_all(8)                      System Manager's Manual                      xfs\_scrub\_all(8)

**NAME**

xfs\_scrub\_all - scrub all mounted XFS filesystems

**SYNOPSIS**

xfs\_scrub\_all [ -hV ]

**DESCRIPTION**

xfs\_scrub\_all attempts to read and check all the metadata on all mounted XFS filesystems. The online scrub is performed via the xfs\_scrub tool, either by running it directly or by using systemd to start it in a restricted fashion. Mounted filesystems are mapped to physical storage devices so that scrub operations can be run in parallel so long as no two scrubbers access the same device simultaneously.

**OPTIONS**

- h    Display help.
  
- V    Prints the version number and exits.

**EXIT CODE**

The exit code returned by xfs\_scrub\_all is the sum of the following conditions:

- 0    - No errors

- 4 - File system errors left uncorrected
- 8 - Operational error
- 16 - Usage or syntax error

These are the same error codes returned by `xfs_scrub`.
