PowerShell Get-Help on command 'Disable-DAManualEntryPointSelection'

PS C:\Users\wahid> Get-Help Disable-DAManualEntryPointSelection

NAME

   Disable-DAManualEntryPointSelection

SYNOPSIS

   Disables a manually selected DirectAccess site, and reverts the selection to

   the default.

SYNTAX

   Disable-DAManualEntryPointSelection [-AsJob] [-CimSession <CimSession[]>]

   [-Confirm] [-ThrottleLimit <Int32>] [-WhatIf] [<CommonParameters>]

DESCRIPTION

   The Disable-DAManualEntryPointSelection cmdlet disables a manually selected

   DirectAccess site and reverts the selection to the default.

   A client computer configured to use multiple DirectAccess sites automatically

   selects the best site. A user can override the automatic selection behavior

   and select a specific DirectAccess site. This cmdlet disables any manual site

   that was selected.

You can prevent a user from overriding the automatic selection by using Group Policy. For more information about using Group Policy to restrict automatic selection changes, see Get-DAClientExperienceConfiguration .

PARAMETERS

-AsJob [<SwitchParameter>]

Runs the cmdlet as a background job. Use this parameter to run commands that take a long time to complete.

The cmdlet immediately returns an object that represents the job and then displays the command prompt. You can continue to work in the session while the job completes. To manage the job, use the `*-Job` cmdlets. To get the job results, use the Receive-Job (https://go.microsoft.com/fwlink/?LinkID=113372)cmdlet.

For more information about Windows PowerShell background jobs, see about_Jobs (https://go.microsoft.com/fwlink/?LinkID=113251).

-CimSession <CimSession[]>

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a New-CimSession (https://go.microsoft.com/fwlink/p/?LinkId=227967) or [Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet. The default is the current session on the local computer.

-Confirm [<SwitchParameter>]

Prompts you for confirmation before running the cmdlet.

-ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of

`0` is entered, then Windows PowerShellr calculates an optimum throttle

limit for the cmdlet based on the number of CIM cmdlets that are running

on the computer. The throttle limit applies only to the current cmdlet,

not to the session or to the computer.

-WhatIf [<SwitchParameter>]

Shows what would happen if the cmdlet runs. The cmdlet is not run.

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug,

ErrorAction, ErrorVariable, WarningAction, WarningVariable,

OutBuffer, PipelineVariable, and OutVariable. For more information, see

about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

-- Example 1: Disable the manual DirectAccess site selection --

PS C:\> Disable-DAManualEntryPointSelection

This cmdlet disables any site that was manually selected, and reverts the

DirectAccess entry point selection to automatic site selection.
