PowerShell Get-Help on command 'Disable-NetworkSwitchFeature'

PS C:\Users\wahid> Get-Help Disable-NetworkSwitchFeature

NAME

    Disable-NetworkSwitchFeature

SYNOPSIS

    Disables features of a network switch.

SYNTAX

    Disable-NetworkSwitchFeature -CimSession <CimSession> [-Confirm] -FeatureName

    <Int32> [-WhatIf] [<CommonParameters>]

    Disable-NetworkSwitchFeature -CimSession <CimSession> [-Confirm] -InputObject

    <CimInstance[]> [-WhatIf] [<CommonParameters>]

    Disable-NetworkSwitchFeature -CimSession <CimSession> [-Confirm] -InstanceId

    <String> [-WhatIf] [<CommonParameters>]

    Disable-NetworkSwitchFeature -CimSession <CimSession> [-Confirm] -Name

    <String> [-WhatIf] [<CommonParameters>]

DESCRIPTION

The Disable-NetworkSwitchFeature cmdlet disables specified features of a network switch.

PARAMETERS

-CimSession <CimSession>

Specifies the CimSession that this cmdlet uses to connect to the network switch. For more information about CimSession objects, type `Get-Help New-CimSession`.

-Confirm [<SwitchParameter>]

Prompts you for confirmation before running the cmdlet.

-FeatureName <Int32>

Specifies a feature name, an integer, of a feature to disable. A feature name might not be unique. This cmdlet disables all features with the same name.

-InputObject <CimInstance[]>

Specifies the input object that is used in a pipeline command.

-InstanceId <String>

Specifies the instance ID of a feature to disable.

-Name <String>

Specifies the name of a feature to disable. This parameter supports wildcard characters.

-WhatIf [<SwitchParameter>]

Shows what would happen if the cmdlet runs. The cmdlet is not run.

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

-------- Example 1: Disable a feature by using its name --------

PS C:\>$Session = New-CimSession -ComputerName "NetworkSwitch08"
PS C:\> Disable-NetworkSwitchFeature -CimSession $Session -Name "SSH"

The first command creates a CimSession for a network switch, and then stores it in the $Session variable. For more information about CimSession objects, type `Get-Help New-CimSession`.

The second command disables the feature named SSH for the network switch NetworkSwitch08 by using the $Session object.

----- Example 2: Disable a feature by using an instance ID -----

PS C:\>Disable-NetworkSwitchFeature -CimSession $Session -InstanceID "Contoso:Feature:2"

This command disables a feature by using the instance ID to identify it. The command includes a CimSession , similar to the first example.
