## PowerShell Get-Help on command 'Get-DAConnectionStatus'

PS C:\Users\wahid> Get-Help Get-DAConnectionStatus

NAME

Get-DAConnectionStatus

### SYNOPSIS

Returns the DirectAccess status of the user.

## SYNTAX

Get-DAConnectionStatus [-AsJob] [-CimSession <CimSession[]>] [-ThrottleLimit <Int32>] [<CommonParameters>]

## DESCRIPTION

The Get-DAConnectionStatus cmdlet returns an object that has the status and sub-status of the DirectAccess connection for the computer. The status reported here is the same as the status in the view-available-networks graphical user interface.

If no object is returned, the computer is not configured for DirectAccess.

#### PARAMETERS

-AsJob [<SwitchParameter>]

Runs the cmdlet as a background job. Use this parameter to run commands that take a long time to complete.

The cmdlet immediately returns an object that represents the job and then displays the command prompt. You can continue to work in the session while the job completes. To manage the job, use the `\*-Job` cmdlets. To get the job results, use the Receive-Job (https://go.microsoft.com/fwlink/?LinkID=113372)cmdlet.

For more information about Windows PowerShell background jobs, see about\_Jobs (https://go.microsoft.com/fwlink/?LinkID=113251).

#### -CimSession <CimSession[]>

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a New-CimSession (https://go.microsoft.com/fwlink/p/?LinkId=227967) or [Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet. The default is the current session on the local computer.

#### -ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of `0` is entered, then Windows PowerShellr calculates an optimum throttle limit for the cmdlet based on the number of CIM cmdlets that are running on the computer. The throttle limit applies only to the current cmdlet, not to the session or to the computer.

#### <CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see - Example 1: Get the DirectAccess status of the local computer -

PS C:\>Get-DAConnectionStatus

This command gets the DirectAccess status of the local computer.

## REMARKS

To see the examples, type: "get-help Get-DAConnectionStatus -examples". For more information, type: "get-help Get-DAConnectionStatus -detailed". For technical information, type: "get-help Get-DAConnectionStatus -full". For online help, type: "get-help Get-DAConnectionStatus -online"
