PowerShell Get-Help on command 'Get-TpmSupportedFeature'

PS C:\Users\wahid> Get-Help Get-TpmSupportedFeature

NAME

Get-TpmSupportedFeature

SYNOPSIS

Verifies whether a TPM supports specified features.

SYNTAX

```
Get-TpmSupportedFeature [-FeatureList] <StringCollection>  
[<CommonParameters>]
```

DESCRIPTION

The Get-TpmSupportedFeature cmdlet verifies whether a Trusted Platform Module (TPM) supports specified TPM features. Not all TPMs support all features.

PARAMETERS

-FeatureList <StringCollection>

Specifies feature names as a string collection. The cmdlet verifies the features that you specify. If you specify an empty collection, \$Null, or

do not include this parameter, the cmdlet verifies all features.

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

----- Example 1: Verify support for key attestation -----

```
PS C:\> Get-TpmSupportedFeature -FeatureList "Key Attestation"  
key attestation
```

This command verifies whether TPM supports the key attestation feature. The cmdlet displays the string, key attestation, so TPM supports that feature.

REMARKS

To see the examples, type: "get-help Get-TpmSupportedFeature -examples".

For more information, type: "get-help Get-TpmSupportedFeature -detailed".

For technical information, type: "get-help Get-TpmSupportedFeature -full".
