PowerShell Get-Help on command 'Get-WindowsErrorReporting'

PS C:\Users\wahid> Get-Help Get-WindowsErrorReporting

NAME

Get-WindowsErrorReporting

SYNOPSIS

Retrieves the Windows Error Reporting status.

SYNTAX

Get-WindowsErrorReporting [<CommonParameters>]

DESCRIPTION

The Get-WindowsErrorReporting cmdlet retrieves the Windows Error Reporting (WER) status for the server.

Windows Error Reporting is a flexible feedback infrastructure that gathers information about hardware and software problems, reports the information to Microsoft, and gives users any available solutions. Windows Error Reporting generates reports in response to system events, such as application crashes or kernel faults.

Use `Enable-WindowsErrorReporting` (`./Enable-WindowsErrorReporting.md`) to enable Windows Error Reporting. After you enable it, WER sends information about application failures to Microsoft. Use `Disable-WindowsErrorReporting` (`./Disable-WindowsErrorReporting.md`) to disable WER.

PARAMETERS

<CommonParameters>

This cmdlet supports the common parameters: `Verbose`, `Debug`, `ErrorAction`, `ErrorVariable`, `WarningAction`, `WarningVariable`, `OutBuffer`, `PipelineVariable`, and `OutVariable`. For more information, see `about_CommonParameters` (<https://go.microsoft.com/fwlink/?LinkID=113216>).

----- Example 1: Get the Windows Error Reporting status -----

```
PS C:\> Get-WindowsErrorReporting
```

This command gets the Windows Error Reporting status, which is either enabled or disabled.

REMARKS

To see the examples, type: `"get-help Get-WindowsErrorReporting -examples"`.

For more information, type: `"get-help Get-WindowsErrorReporting -detailed"`.

For technical information, type: `"get-help Get-WindowsErrorReporting -full"`.

For online help, type: `"get-help Get-WindowsErrorReporting -online"`
