PowerShell Get-Help on command 'Install-Language'

PS C:\Users\wahid> Get-Help Install-Language

NAME

    Install-Language

SYNOPSIS

    Installs a language onto a device.

SYNTAX

    Install-Language [-Language] <String> [-AsJob] [-CopyToSettings]

    [-ExcludeFeatures] [<CommonParameters>]

DESCRIPTION

    Downloads and installs the available language components for the specified

    language onto a device.

    You can also change your Display Language by using the International module

    commands (`Set-WinUILanguageOverride <Installed Language>`)

PARAMETERS

-AsJob [<SwitchParameter>]

   If specified, this parameter will execute the language installation as an

   async PowerShell job

   (/powershell/module/microsoft.powershell.core/about/about_jobs).

-CopyToSettings [<SwitchParameter>]

   If specified, this parameter sets the System and Default Device Settings

   (Windows Display Language, regional and locale formats) to the installed

   language following the installation.

   After a language is added with this command, you have to restart the

   device or login again for changes to take effect. Once you log back in,

   you can change your Windows Display Language in Settings App to change

   the device UI language.

-ExcludeFeatures [<SwitchParameter>]

   If specified, the associated language Features on Demand won't be

   installed.

-Language <String>

   The bcp47 tag of the language that you're installing.

<CommonParameters>

   This cmdlet supports the common parameters: Verbose, Debug,

   ErrorAction, ErrorVariable, WarningAction, WarningVariable,

   OutBuffer, PipelineVariable, and OutVariable. For more information, see

   about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

------------ Example 1: Add a language to a device ------------

Install-Language ja-JP

This command adds the Japanese language to a device.
