NOTES

COMPLEX PARAMETER PROPERTIES

To create the parameters described below, construct a hash table containing the appropriate properties. For information on hash tables, run Get-Help

about_Hash_Tables.

HEALTHPROBESETTING <IHealthProbeParameters>: Health probe settings to the origin that is used to determine the health of the origin.

[ProbeIntervalInSecond <Int32?>]: The number of seconds between health probes. Default is 240sec.

[ProbePath <String>]: The path relative to the origin that is used to determine the health of the origin.

[ProbeProtocol <ProbeProtocol?>]: Protocol to use for health probe.

[ProbeRequestType <HealthProbeRequestType?>]: The type of health probe request that is made.

LOADBALANCINGSETTING <ILoadBalancingSettingsParameters>: Load balancing settings for a backend pool

[AdditionalLatencyInMillisecond <Int32?>]: The additional latency in milliseconds for probes to fall into the lowest latency bucket
