PowerShell Get-Help on command 'Out-Null'

PS C:\Users\wahid> Get-Help Out-Null

NAME

    Out-Null

SYNOPSIS

    Hides the output instead of sending it down the pipeline or displaying it.

SYNTAX

    Out-Null [-InputObject <System.Management.Automation.PSObject>]

    [<CommonParameters>]

DESCRIPTION

    The `Out-Null` cmdlet sends its output to NULL, in effect, removing it from

    the pipeline and preventing the output from being displayed on screen. This

    only affects the standard output stream. Other output streams, like the Error

    stream are not affected. Exceptions will be displayed. This makes it easier to

    test your command for any errors.

PARAMETERS

-InputObject <System.Management.Automation.PSObject>

   Specifies the object to be sent to NULL (removed from pipeline). Enter a

   variable that contains the objects, or type a command or expression that

   gets the objects.

<CommonParameters>

   This cmdlet supports the common parameters: Verbose, Debug,

   ErrorAction, ErrorVariable, WarningAction, WarningVariable,

   OutBuffer, PipelineVariable, and OutVariable. For more information, see

   about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

------------------- Example 1: Delete output -------------------

Get-ChildItem | Out-Null

This command gets items in the current location/directory, but its output is

not passed through the pipeline nor displayed at the command line. This is

useful for hiding output that you do not need.

REMARKS

   To see the examples, type: "get-help Out-Null -examples".

   For more information, type: "get-help Out-Null -detailed".

   For technical information, type: "get-help Out-Null -full".

   For online help, type: "get-help Out-Null -online"
