## PARAMETERS

`-AsJob` [`<SwitchParameter>`]

Runs the cmdlet as a background job. Use this parameter to run commands that take a long time to complete.

`-CimSession` `<CimSession[]>`

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a `New-CimSession` (<https://go.microsoft.com/fwlink/p/?LinkId=227967>) or `[Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet`. The default is the current session on the local computer.

`-Confirm` [`<SwitchParameter>`]

Prompts you for confirmation before running the cmdlet.

`-InitiatorIds` `<String[]>`

Specifies one or more initiator IDs on which this cmdlet acts.

`-InputObject` `<CimInstance[]>`

Specifies the input object that is used in a pipeline command.

`-MaskingSetFriendlyName` `<String[]>`

Specifies the friendly name of the masking set from which to remove the InitiatorID.

`-MaskingSetUniqueld` `<String[]>`

Specifies the UniqueID of the masking set from which to remove the InitiatorID.

#### -PassThru [<SwitchParameter>]

Sends items from the interactive window down the pipeline as input to other cmdlets. By default, this cmdlet does not generate any output.

To send items from the interactive window down the pipeline, click to select the items and then click OK. Shift-click and Ctrl-click are supported.

#### -ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of `0` is entered, then Windows PowerShell calculates an optimum throttle limit for the cmdlet based on the number of CIM cmdlets that are running on the computer. The throttle limit applies only to the current cmdlet, not to the session or to the computer.

#### -WhatIf [<SwitchParameter>]

Shows what would happen if the cmdlet runs. The cmdlet is not run.

#### <CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see [about\\_CommonParameters \(https://go.microsoft.com/fwlink/?LinkID=113216\)](https://go.microsoft.com/fwlink/?LinkID=113216).

----- Example 1: Remove an initiator ID from a masking set -----

```
PS C:\> $initid = (Get-InitiatorID)
```

```
PS C:\> Remove-InitiatorIdFromMaskingSet -InitiatorIDs $initid  
-MaskingSetFriendlyName "Server1A-MaskingSet"
```

This example removes an initiator ID from a masking set. This cmdlet prevents the specified initiator ID from accessing any of the resources defined in the masking set
