PowerShell Get-Help on command 'Remove-VpnConnectionTriggerTrustedNetwork'

PS C:\Users\wahid> Get-Help Remove-VpnConnectionTriggerTrustedNetwork

NAME

   Remove-VpnConnectionTriggerTrustedNetwork

SYNOPSIS

   Removes DNS suffixes previously configured as trusted networks from the VPN

   profile.

SYNTAX

   Remove-VpnConnectionTriggerTrustedNetwork [-ConnectionName] <String>

   [-DnsSuffix] <String[]> [-AsJob] [-CimSession <CimSession[]>] [-Confirm]

   [-Force] [-PassThru] [-ThrottleLimit <Int32>] [-WhatIf] [<CommonParameters>]

DESCRIPTION

   The Remove-VpnConnectionTriggerTrustedNetwork cmdlet removes Domain Name

   System (DNS) suffixes previously configured as trusted networks from the VPN

   profile. When you remove a DNS suffix from the virtual private network (VPN)

   profile, the VPN connection does not automatically start when the DNS suffix

   is present on the physical interface on the client.

PARAMETERS

  -AsJob [<SwitchParameter>]

    Runs the cmdlet as a background job. Use this parameter to run commands

    that take a long time to complete.

  -CimSession <CimSession[]>

    Runs the cmdlet in a remote session or on a remote computer. Enter a

    computer name or a session object, such as the output of a New-CimSession

    (https://go.microsoft.com/fwlink/p/?LinkId=227967) or

    [Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet.

    The default is the current session on the local computer.

  -Confirm [<SwitchParameter>]

    Prompts you for confirmation before running the cmdlet.

  -ConnectionName <String>

    Specifies the name of a VPN connection profile. To view existing VPN

    connection profiles, use the Get-VpnConnection cmdlet.

  -DnsSuffix <String[]>

    Specifies an array of DNS suffixes.

  -Force [<SwitchParameter>]

    Indicates that the cmdlet removes DNS suffixes from the VPN profile

    without a confirmation message.

  -PassThru [<SwitchParameter>]

    Returns an object representing the item with which you are working. By

    default, this cmdlet does not generate any output. If you specify this

    parameter, the cmdlet returns the VpnConnectionTriggerTrustedNetwork

    object that contains the list of trusted networks for auto triggering.

-ThrottleLimit <Int32>

    Specifies the maximum number of concurrent operations that can be

    established to run the cmdlet. If this parameter is omitted or a value of

    `0` is entered, then Windows PowerShellr calculates an optimum throttle

    limit for the cmdlet based on the number of CIM cmdlets that are running

    on the computer. The throttle limit applies only to the current cmdlet,

    not to the session or to the computer.

-WhatIf [<SwitchParameter>]

    Shows what would happen if the cmdlet runs. The cmdlet is not run.

<CommonParameters>

    This cmdlet supports the common parameters: Verbose, Debug,

    ErrorAction, ErrorVariable, WarningAction, WarningVariable,

    OutBuffer, PipelineVariable, and OutVariable. For more information, see

    about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

---- Example 1: Remove trusted networks from a VPN profile ----

PS C:\> Remove-VpnConnectionTriggerTrustedNetwork -ConnectionName "ContosoVPN"

-DnsSuffix "newyork.contoso.com","washington.contoso.com" -PassThru -Force

ConnectionName : Contoso

DnsSuffix   : {newyork.contoso.com, washington.contoso.com}

This command removes trusted networks from the ContosoVPN VPN profile.
