PowerShell Get-Help on command 'Set-IscsiChapSecret'

PS C:\Users\wahid> Get-Help Set-IscsiChapSecret

NAME

    Set-IscsiChapSecret

SYNOPSIS

    Sets a CHAP secret key for use with iSCSI initiator connections.

SYNTAX

    Set-IscsiChapSecret [-AsJob] [-ChapSecret <String>] [-CimSession

    <CimSession[]>] [-ThrottleLimit <Int32>] [<CommonParameters>]

DESCRIPTION

    The Set-IscsiChapSecret cmdlet sets a CHAP secret key for use with iSCSI

    initiator connections.

PARAMETERS

  -AsJob [<SwitchParameter>]

    Runs the cmdlet as a background job. Use this parameter to run commands

    that take a long time to complete.

The cmdlet immediately returns an object that represents the job and then displays the command prompt. You can continue to work in the session while the job completes. To manage the job, use the `*-Job` cmdlets. To get the job results, use the Receive-Job (https://go.microsoft.com/fwlink/?LinkID=113372)cmdlet.

For more information about Windows PowerShell background jobs, see about_Jobs (https://go.microsoft.com/fwlink/?LinkID=113251).

-ChapSecret <String>

Specifies the CHAP secret key for use with the iSCSI initiator connections.

-CimSession <CimSession[]>

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a New-CimSession (https://go.microsoft.com/fwlink/p/?LinkId=227967) or [Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet. The default is the current session on the local computer.

-ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of `0` is entered, then Windows PowerShellr calculates an optimum throttle limit for the cmdlet based on the number of CIM cmdlets that are running on the computer. The throttle limit applies only to the current cmdlet, not to the session or to the computer.

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

---------------- Example 1: Set CHAP secret key ----------------

PS C:\> Set-IscsiChapSecret -ChapSecret "12345678912345"

This command sets the CHAP secret key to a value.
