### ***PowerShell Get-Help on command 'Set-StorageFileServer'***

***PS C:\Users\wahid> Get-Help Set-StorageFileServer***

#### NAME

Set-StorageFileServer

#### SYNOPSIS

Modifies a storage file server.

#### SYNTAX

```
Set-StorageFileServer [-AsJob] [-CimSession <CimSession[]>] [-Confirm]
[-FriendlyName <String[]>] -NewFriendlyName <String> [-PassThru]
[-ThrottleLimit <Int32>] [-WhatIf] [<CommonParameters>]
```

```
Set-StorageFileServer [-AsJob] [-CimSession <CimSession[]>] [-Confirm]
-InputObject <CimInstance[]> -NewFriendlyName <String> [-PassThru]
[-ThrottleLimit <Int32>] [-WhatIf] [<CommonParameters>]
```

```
Set-StorageFileServer [-AsJob] [-CimSession <CimSession[]>] [-Confirm]
-NewFriendlyName <String> [-PassThru] [-ThrottleLimit <Int32>] -Uniqueid
<String[]> [-WhatIf] [<CommonParameters>]
```

## DESCRIPTION

The Set-StorageFileServer cmdlet modifies a storage file server.

## PARAMETERS

-AsJob [<SwitchParameter>]

Runs the cmdlet as a background job. Use this parameter to run commands that take a long time to complete.

-CimSession <CimSession[]>

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a New-CimSession (<https://go.microsoft.com/fwlink/p/?LinkId=227967>) or [Get-CimSession](<https://go.microsoft.com/fwlink/p/?LinkId=227966>)cmdlet. The default is the current session on the local computer.

-Confirm [<SwitchParameter>]

Prompts you for confirmation before running the cmdlet.

-FriendlyName <String[]>

Specifies the friendly name for a file server. The FriendlyName can be used in place of HostName. Not all implementations support FriendlyName .

-InputObject <CimInstance[]>

Specifies the input object that is used in a pipeline command.

-NewFriendlyName <String>

Specifies the new friendly name for the file server.

-PassThru [<SwitchParameter>]

Returns an object representing the item with which you are working. By default, this cmdlet does not generate any output.

-ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of `0` is entered, then Windows PowerShell calculates an optimum throttle limit for the cmdlet based on the number of CIM cmdlets that are running on the computer. The throttle limit applies only to the current cmdlet, not to the session or to the computer.

-UniqueId <String[]>

Specifies the unique ID of the file server.

-WhatIf [<SwitchParameter>]

Shows what would happen if the cmdlet runs. The cmdlet is not run.

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see `about_CommonParameters` (<https://go.microsoft.com/fwlink/?LinkID=113216>).

----- Example 1: Set the friendly name of a file server -----

```
PS C:\>Set-StorageFileServer -HostName "Costoso-Sales" -FriendlyName "Data files for the Sales operation"
```

This command sets the friendly name of a file server to Data files for the Sales operation.
