### ***PowerShell Get-Help on command 'Set-WinSystemLocale'***

***PS C:\Users\wahid> Get-Help Set-WinSystemLocale***

#### NAME

Set-WinSystemLocale

#### SYNOPSIS

Sets the system locale for the current computer.

#### SYNTAX

```
Set-WinSystemLocale [-SystemLocale] <CultureInfo> [<CommonParameters>]
```

#### DESCRIPTION

The Set-WinSystemLocale cmdlet sets the system locale for the current computer. The System-locale setting determines which code pages, which include ANSI, DOS, and Macintosh, the computer uses by default. If you change the System-locale setting, the necessary bitmap font files are installed to support legacy applications in the selected language.

This is a system setting. It can only be changed by a user who has Administrator permissions. Changes take effect after the computer is restarted.

## PARAMETERS

`-SystemLocale <CultureInfo>`

Specifies a system locale.

`<CommonParameters>`

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see `about_CommonParameters` (<https://go.microsoft.com/fwlink/?LinkID=113216>).

----- Example 1: Set the system locale -----

```
PS C:\> Set-WinSystemLocale -SystemLocale ja-JP
```

This command sets the system locale to Japanese (Japan).

## REMARKS

To see the examples, type: "get-help Set-WinSystemLocale -examples".

For more information, type: "get-help Set-WinSystemLocale -detailed".

For technical information, type: "get-help Set-WinSystemLocale -full".
