PowerShell Get-Help on command 'Unregister-ClusteredScheduledTask'

PS C:\Users\wahid> Get-Help Unregister-ClusteredScheduledTask

NAME

    Unregister-ClusteredScheduledTask

SYNOPSIS

    Removes a scheduled task from a failover cluster.

SYNTAX

    Unregister-ClusteredScheduledTask [-TaskName] <String> [[-Cluster] <String>]

    [-AsJob] [-CimSession <CimSession[]>] [-ThrottleLimit <Int32>]

    [<CommonParameters>]

    Unregister-ClusteredScheduledTask [[-InputObject] <CimInstance>] [-AsJob]

    [-CimSession <CimSession[]>] [-ThrottleLimit <Int32>] [<CommonParameters>]

DESCRIPTION

    The Unregister-ClusteredScheduledTask cmdlet removes a clustered scheduled

    task from all nodes of a failover cluster.

For more information about the Task Scheduler, see the Task Scheduler Overview

(https://technet.microsoft.com/en-us/library/cc721871.aspx)topic in the

TechNet Library at http://technet.microsoft.com/en-us/library/cc721871.aspx.

PARAMETERS

-AsJob [<SwitchParameter>]

   Runs the cmdlet as a background job. Use this parameter to run commands

   that take a long time to complete.

-CimSession <CimSession[]>

   Runs the cmdlet in a remote session or on a remote computer. Enter a

   computer name or a session object, such as the output of a New-CimSession

   (https://go.microsoft.com/fwlink/p/?LinkId=227967) or

   [Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet.

   The default is the current session on the local computer.

-Cluster <String>

   Specifies the name of a failover cluster. If you do not specify a cluster,

   the cmdlet uses the current node cluster name.

-InputObject <CimInstance>

   Specifies the input object that is used in a pipeline command.

-TaskName <String>

   Specifies a name of a scheduled task.

-ThrottleLimit <Int32>

   Specifies the maximum number of concurrent operations that can be

   established to run the cmdlet. If this parameter is omitted or a value of

   `0` is entered, then Windows PowerShellr calculates an optimum throttle

   limit for the cmdlet based on the number of CIM cmdlets that are running

   on the computer. The throttle limit applies only to the current cmdlet,

   not to the session or to the computer.

<CommonParameters>

    This cmdlet supports the common parameters: Verbose, Debug,

    ErrorAction, ErrorVariable, WarningAction, WarningVariable,

    OutBuffer, PipelineVariable, and OutVariable. For more information, see

    about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

----------------- Example 1: Unregister a task -----------------

PS C:\> Unregister-ClusteredScheduledTask -TaskName "Task01" -Cluster

"Cluster07"

This command removes the task named Task01 from the cluster named Cluster07.

REMARKS

    To see the examples, type: "get-help Unregister-ClusteredScheduledTask

    -examples".

    For more information, type: "get-help Unregister-ClusteredScheduledTask

    -detailed".
