PowerShell Get-Help on command 'Unregister-ScheduledTask'

PS C:\Users\wahid> Get-Help Unregister-ScheduledTask

NAME

    Unregister-ScheduledTask

SYNOPSIS

    Unregisters a scheduled task.

SYNTAX

    Unregister-ScheduledTask [-AsJob] [-CimSession <CimSession[]>] [-Confirm]

    -InputObject <CimInstance[]> [-PassThru] [-ThrottleLimit <Int32>] [-WhatIf]

    [<CommonParameters>]

    Unregister-ScheduledTask [[-TaskName] <String[]>] [[-TaskPath] <String[]>]

    [-AsJob] [-CimSession <CimSession[]>] [-Confirm] [-PassThru] [-ThrottleLimit

    <Int32>] [-WhatIf] [<CommonParameters>]

DESCRIPTION

    The Unregister-ScheduledTask cmdlet unregisters a scheduled task from the

    Windows Task Scheduler service on a local computer.

PARAMETERS

  -AsJob [<SwitchParameter>]

    Runs the cmdlet as a background job. Use this parameter to run commands

    that take a long time to complete.

  -CimSession <CimSession[]>

    Runs the cmdlet in a remote session or on a remote computer. Enter a

    computer name or a session object, such as the output of a New-CimSession

    (https://go.microsoft.com/fwlink/p/?LinkId=227967) or

    [Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet.

    The default is the current session on the local computer.

  -Confirm [<SwitchParameter>]

    Prompts you for confirmation before running the cmdlet.

  -InputObject <CimInstance[]>

    Specifies the input object that is used in a pipeline command.

  -PassThru [<SwitchParameter>]

    Returns an object representing the item with which you are working. By

    default, this cmdlet does not generate any output.

  -TaskName <String[]>

    Specifies an array of one or more names for a scheduled task.

  -TaskPath <String[]>

    Specifies an array of one or more paths for scheduled tasks in Task

    Scheduler namespace. You can use "*" for a wildcard character query. You

    can use \ for the root folder. To specify a full TaskPath you need to

    include the leading and trailing \ *. If you do not specify a path, the

    cmdlet uses the root folder.

-ThrottleLimit <Int32>

    Specifies the maximum number of concurrent operations that can be

    established to run the cmdlet. If this parameter is omitted or a value of

    `0` is entered, then Windows PowerShellr calculates an optimum throttle

    limit for the cmdlet based on the number of CIM cmdlets that are running

    on the computer. The throttle limit applies only to the current cmdlet,

    not to the session or to the computer.

-WhatIf [<SwitchParameter>]

    Shows what would happen if the cmdlet runs. The cmdlet is not run.

<CommonParameters>

    This cmdlet supports the common parameters: Verbose, Debug,

    ErrorAction, ErrorVariable, WarningAction, WarningVariable,

    OutBuffer, PipelineVariable, and OutVariable. For more information, see

    about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

------- Example 1: Unregister a task in the root folder -------

PS C:\> Unregister-ScheduledTask -TaskName "HardwareInventory"

This command unregisters a task named HardwareInventory in the root folder.

You must confirm the action before the command performs it.

---- Example 2: Unregister a task in the Event Viewer Tasks ----

PS C:\> Unregister-ScheduledTask -TaskPath '\Event Viewer Tasks\' -TaskName

'ForwardedEvents' -Confirm:$false

This command unregisters a task named ForwardedEvents in the Event Viewer

Tasks folder. You won't have to confirm on this action.
