

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'NAN.3' command

\$ man NAN.3

INFINITY(3) Linux Programmer's Manual INFINITY(3)

NAME

INFINITY, NAN, HUGE_VAL, HUGE_VALF, HUGE_VALL - floating-point con?

starts

SYNOPSIS

```
#define _ISOC99_SOURCE   /* See feature_test_macros(7) */
```

```
#include <math.h>
```

INFINITY

NAN

HUGE_VAL

HUGE_VALF

HUGE_VALL

DESCRIPTION

The macro INFINITY expands to a float constant representing positive infinity.

The macro NAN expands to a float constant representing a quiet NaN (when supported). A quiet NaN is a NaN ("not-a-number") that does not raise exceptions when it is used in arithmetic. The opposite is a signaling NaN. See IEC 60559:1989.

The macros HUGE_VAL, HUGE_VALF, HUGE_VALL expand to constants of types double, float, and long double, respectively, that represent a large positive value, possibly positive infinity.

CONFORMING TO

C99.

On a glibc system, the macro HUGE_VAL is always available. Availability of the NAN macro can be tested using #ifdef NAN, and similarly for INFINITY, HUGE_VALF, HUGE_VALL. They will be defined by <math.h> if _ISOC99_SOURCE or _GNU_SOURCE is defined, or __STDC_VERSION__ is defined and has a value not less than 199901L.
