Red Hat Enterprise Linux Release 9.2 Manual Pages on 'acosl.3' command

\$ man acosl.3

ACOS(3) Linux Programmer's Manual ACOS(3)

NAME

acos, acosf, acosl - arc cosine function

SYNOPSIS

```
#include <math.h>
```

```
double acos(double x);
```

```
float acosf(float x);
```

```
long double acosl(long double x);
```

Link with -lm.

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

acosf(), acosl():

```
_ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L
```

```
|| /* Since glibc 2.19: */ _DEFAULT_SOURCE
```

```
|| /* Glibc versions <= 2.19: */ _BSD_SOURCE || _SVID_SOURCE
```

DESCRIPTION

These functions calculate the arc cosine of x ; that is the value whose cosine is x .

RETURN VALUE

On success, these functions return the arc cosine of x in radians; the return value is in the range $[0, \pi]$.

If x is a NaN, a NaN is returned.

If x is $+1$, $+0$ is returned.

If x is positive infinity or negative infinity, a domain error occurs,

and a NaN is returned.

If x is outside the range [-1, 1], a domain error occurs, and a NaN is returned.

ERRORS

See `math_error(7)` for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: x is outside the range [-1, 1]

`errno` is set to `EDOM`. An invalid floating-point exception (`FE_INVALID`) is raised.

ATTRIBUTES

For an explanation of the terms used in this section, see `attributes(7)`.

?`acos()`, `acosf()`, `acosl()` ? Thread safety ? MT-Safe ?

??

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.

The variant returning double also conforms to SVr4, 4.3BSD, C89.
