Red Hat Enterprise Linux Release 9.2 Manual Pages on 'appstream-compose.1' command

$ man appstream-compose.1

APPSTREAM-COMPOSE(1)   User Commands   APPSTREAM-COMPOSE(1)

NAME

    appstream-compose - Generate AppStream metadata

SYNOPSIS

    appstream-compose [OPTION...]

DESCRIPTION

    This manual page documents briefly the appstream-compose command.

    appstream-compose is a simple app that takes a prefix (default /usr)

    and a set of application names. It looks for appdata, metainfo, desktop

    and icon files with that basename in

    $prefix/share/[appdata|metainfo|applications|icons] and generates

    appstream xml files and icons in (by default) $prefix/share/app-info.

AUTHOR
