Red Hat Enterprise Linux Release 9.2 Manual Pages on 'baobab.1' command

\$ man baobab.1

BAOBAB(1) General Commands Manual BAOBAB(1)

NAME

baobab - A graphical disk usage analyzer for the GNOME desktop

SYNOPSIS

baobab [OPTIONS?] [DIRECTORY]

DESCRIPTION

baobab (a.k.a. Disk Usage Analyzer) is able to scan either specific folders (local and remote) or devices, in order to give the user a tree representation including each directory size or percentage in the branch. It also auto-detects any mounted/unmounted device. A graphical representation is also provided for any selected folder.

OPTIONS

-a, --all-file-systems

Do not skip directories on different file systems. Ignored if DIRECTORY is not specified.

--help Show command line options.

--version

Output version information and exit.

BUGS

Bugs should be reported to the GNOME issue tracker at <http://git?lab.gnome.org/GNOME/baobab/issues>.

ADDITIONAL INFORMATION
