Red Hat Enterprise Linux Release 9.2 Manual Pages on 'btrace.8' command

$ man btrace.8

BTRACE(8)   BTRACE(8)

NAME

　　btrace - perform live tracing for block devices

SYNOPSIS

　　btrace [-s] [-t] [-w N] [-n N] [-b N] [-r <dbg mnt>] [-a <trace>...]

　　<dev>...

DESCRIPTION

　　The btrace script provides a quick and easy way to do live tracing of

　　block devices.   It calls blktrace on the specified devices and pipes

　　the output through blkparse for formatting. See blktrace (8) for more

　　in-depth information about how blktrace works.

OPTIONS

　　-s Displays data sorted by program (see blkparse (1)).

　　-t Displays time deltas per IO (see blkparse (1)).

　　-w N Sets run time to the number of seconds specified (see blktrace

　　　(8)).

　　-n N Specifies the number of buffers to use (see blktrace (8)).

　　-b N Specifies buffer size for event extraction (scaled by 1024) (see

　　　blktrace (8)).

　　-r <dbg mnt> Specifies the debugfs mountpoint.

　　-a <trace>... Adds mask to current filter (see blktrace (8)).

　　<dev> Specifies the device to trace.

EXAMPLE

Simply running

   % btrace /dev/sda

will show a trace of the device /dev/sda.

AUTHORS

blkparse was written by Jens Axboe, Alan D. Brunelle and Nathan Scott.
