$ man buildah-source-add.1

buildah-source-add(1)   General Commands Manual   buildah-source-add(1)

NAME

    buildah-source-add - Add a source artifact to a source image

SYNOPSIS

    buildah source add [options] path artifact

DESCRIPTION

    Add add a source artifact to a source image. The artifact will be

    added as a gzip-compressed tar ball. Add attempts to auto-tar and

    auto-compress only if necessary.

    Note that the buildah-source command and all its subcommands are exper?

    imental and may be subject to future changes

OPTIONS

    --annotation key=value

    Add an annotation to the layer descriptor in the source-image manifest.

    The input format is key=value.
