

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'bzcmp.1' command

\$ man bzcmp.1

BZDIFF(1) General Commands Manual BZDIFF(1)

NAME

bzcmp, bzdifff - compare bzip2 compressed files

SYNOPSIS

bzcmp [cmp_options] file1 [file2]

bzdifff [diff_options] file1 [file2]

DESCRIPTION

Bzcmp and bzdifff are used to invoke the cmp or the diff program on bzip2 compressed files. All options specified are passed directly to cmp or diff. If only 1 file is specified, then the files compared are file1 and an uncompressed file1.bz2. If two files are specified, then they are uncompressed if necessary and fed to cmp or diff. The exit status from cmp or diff is preserved.

SEE ALSO

cmp(1), diff(1), bzmore(1), bzless(1), bzgrep(1), bzip2(1)

BUGS

Messages from the cmp or diff programs refer to temporary filenames instead of those specified.
