Red Hat Enterprise Linux Release 9.2 Manual Pages on 'chcat.8' command

\$ man chcat.8

CHCAT(8) User Commands CHCAT(8)

NAME

chcat - change file SELinux security category

SYNOPSIS

chcat category file...

chcat -l category user...

chcat [[+|-]category...] file...

chcat -l [[+|-]category...] user...

chcat [-d] file...

chcat -l [-d] user...

chcat -L [-l] [user ...]

DESCRIPTION

Change/Remove the security category for each file or user.

Use +/- to add/remove categories from a file or user.

Note: When removing a category you must specify '--' on the command line before using the -Category syntax. This tells the command that you have finished entering options and are now specifying a category name instead.

-d delete the category from each FILE/USER.

-L list available categories.

-l Tells chcat to operate on users instead of files.

SEE ALSO

chcon(1), selinux(8), semanage(8)

When operating on files this script wraps the chcon command.

FILES

/etc/selinux/{SELINUXTYPE}/setrans.conf

/etc/selinux/{SELINUXTYPE}/seusers

chcat
