## **Red Hat Enterprise Linux Release 9.2 Manual Pages on 'clevis-luks-unbind.1' command**

**\$ man clevis-luks-unbind.1**

CLEVIS-LUKS-UNBIND(1) CLEVIS-LUKS-UNBIND(1)

### NAME

clevis-luks-unbind - Unbinds a pin bound to a LUKS volume

### SYNOPSIS

clevis luks unbind -d DEV -s SLT

### OVERVIEW

The clevis luks unbind command unbinds a pin bound to a LUKS volume.

For example:

```
$ clevis luks unbind -d /dev/sda -s 1
```

### OPTIONS

? -d DEV : The bound LUKS device

? -s SLT : The slot number for the pin to unbind. When using LUKSv1, this is the the LUKSmeta slot

? -f : Do not ask for confirmation and wipe slot in batch-mode
