## Red Hat Enterprise Linux Release 9.2 Manual Pages on 'cupsdisable.8' command

### $ man cupsdisable.8

cupsenable(8)                    Apple Inc.                    cupsenable(8)

NAME

    cupsdisable, cupsenable - stop/start printers and classes

SYNOPSIS

    cupsdisable  [  -E  ] [ -U username ] [ -c ] [ -h server[:port] ] [ -r

    reason ] [ --hold ] destination(s)

    cupsenable [ -E ] [ -U username ] [ -c ] [ -h server[:port] ]  [  --re?

    lease ] destination(s)

DESCRIPTION

    cupsenable starts the named printers or classes while cupsdisable stops

    the named printers or classes.

OPTIONS

    The following options may be used:

    -E   Forces encryption of the connection to the server.

    -U username

        Uses the specified username when connecting to the server.

    -c   Cancels all jobs on the named destination.

    -h server[:port]

        Uses the specified server and port.

    --hold

        Holds remaining jobs on the named printer.   Useful  for  allowing

        the current job to complete before performing maintenance.

    -r "reason"

Sets  the message associated with the stopped state.  If no reason

is specified then the message is set to "Reason Unknown".

--release

Releases pending jobs for printing.  Use after running cupsdisable

with the --hold option to resume printing.

## CONFORMING TO

Unlike  the System V printing system, CUPS allows printer names to con?

tain any printable character except SPACE, TAB,  "/",  or  "#".   Also,

printer and class names are not case-sensitive.

The System V versions of these commands are disable and enable, respec?

tively.  They have been renamed to avoid  conflicts  with  the  bash(1)

build-in commands of the same names.

The  CUPS versions of disable and enable may ask the user for an access

password depending on the printing system configuration.  This  differs

from the System V versions which require the root user to execute these

commands.
