Red Hat Enterprise Linux Release 9.2 Manual Pages on 'default_type.5' command

\$ man default_type.5

default_type(5) SELinux configuration default_type(5)

NAME

default_type - The SELinux default type configuration file

DESCRIPTION

The default_type file contains entries that allow SELinux-aware applications such as newrole(1) to select a default type for a role if one is not supplied.

selinux_default_type_path(3) will return the active policy path to this file. The default, default type file is:

```
/etc/selinux/{SELINUXTYPE}/contexts/default_type
```

Where {SELINUXTYPE} is the entry from the selinux configuration file config (see selinux_config(5)).

get_default_type(3) reads this file to determine a type for the active policy.

FILE FORMAT

Each line within the default_type file is formatted with role:type entries where:

role

The SELinux role.

type

The domain type that is returned for this role.

EXAMPLE

```
# ./contexts/default_type  
auditadm_r:auditadm_t  
user_r:user_t
```
