Red Hat Enterprise Linux Release 9.2 Manual Pages on 'dnf.kpatch.8' command

\$ man dnf.kpatch.8

DNF-KPATCH(8) System Manager's Manual DNF-KPATCH(8)

NAME

dnf-kpatch - kpatch patch module installation plugin

SYNOPSIS

dnf kpatch operation

DESCRIPTION

dnf-kpatch is a dnf(8) plugin providing automated installation of kpatch-patch packages. When enabled, installation of new kernel packages via dnf(8) will trigger installation of the latest kpatch-patch package targeting the same kernel version.

OPTIONS

operation

auto Installs missing kpatch-patch packages for installed kernels and enables automatic kpatch-patch installation for future kernel installations.

manual Disables automatic installation of kpatch-patch packages.

install Installs missing kpatch-patch packages for installed kernels.

status Queries the current installation setting of dnf-kpatch.

SEE ALSO

dnf(8), kpatch(1)

BUGS

No known bugs.

REPORTING BUGS

To report a bug, raise an issue on kpatch-dnf project page

?<https://github.com/dynup/kpatch-dnf/issues?>.
