Red Hat Enterprise Linux Release 9.2 Manual Pages on 'dump-acct.8' command

\$ man dump-acct.8

DUMP_ACCT(8) System Manager's Manual DUMP_ACCT(8)

NAME

dump-acct - print an acct/pacct file in human-readable format

SYNOPSIS

dump-acct [-r|--reverse] [-R|--raw] [-n|--num recs] [--byte-swap]
[--format] [--ahz freq] [-h|--help] [files]

DESCRIPTION

The dump-acct command transforms the output file from the accton format to the human-readable format: one record per line. Each record consists of several fields which are separated by character "|" (the meaning of concrete field depends on the version of kernel package with which the accton file was created).

OPTIONS

The following options are supported:

-r, --reverse

Print the output in reverse order.

-R, --raw

The records will be printed without any parsing.

-n, --num NUMRECS

Display only the first NUMRECS number of records.

--byteswap

Swap the bytes (relative to your system's native byte order) in

--raw output.

--format

Set output format with --raw option.

--ahz FREQ

Set the AHZ (platform dependent frequency in Hertz) to FREQ.

-h, --help

Print a help message and the default location of the process ac?
counting file and exit.
