Red Hat Enterprise Linux Release 9.2 Manual Pages on 'genhomedircon.8' command

$ man genhomedircon.8

GENHOMEDIRCON(8)   SELinux   GENHOMEDIRCON(8)

NAME

   genhomedircon - generate SELinux file context configuration entries for

   user home directories

DESCRIPTION

   genhomedircon is a script that executes semodule to rebuild the cur?

   rently active SELinux policy (without reloading it) and to create the

   labels for each user home directory based on directory paths returned

   by calls to getpwent().

   The latter functionality depends on the "usepasswd" parameter being set

   to "true" (default) in /etc/selinux/semanage.conf.

   This script is usually executed by semanage although this default be?

   havior can be optionally modified by setting to "true" the "disable-

   genhomedircon" in /etc/selinux/semanage.conf.

   Directories can be excluded from the list of home directories by the

   setting "ignoredirs" in /etc/selinux/semanage.conf.
