Red Hat Enterprise Linux Release 9.2 Manual Pages on 'gsf-office-thumbnailer.1' command

\$ man gsf-office-thumbnailer.1

GSF-OFFICE-THUMBNAILER(1) GNOME GSF-OFFICE-THUMBNAILER(1)

NAME

gsf-office-thumbnailer - office files thumbnailer for the GNOME desktop

SYNOPSIS

gsf-office-thumbnailer [OPTIONS] infile outfile

DESCRIPTION

This manual page briefly documents the gsf-office-thumbnailer command.

gsf-office-thumbnailer is used internally by GNOME applications such as

nautilus to generate thumbnails of several types of office application

files. While it is possible to invoke it manually, it is usually in?

voked automatically by nautilus.

OPTIONS

This program follows the usual GNU command line syntax, with single

letter options starting with a single dash ('-') and longer options

starting with two dashes ('--').

Main options

-i, --input=filename

Name of file for which to create a thumbnail

-o, --output=filename

Name of the file in which to store the thumbnail

-s, --size=N

Size of thumbnail in pixels; the thumbnail will be at most N*N

pixels large.

Help options

-, --help

Display a brief usage message
