\$ man installkernel.8

INSTALLKERNEL(8) System Manager's Manual INSTALLKERNEL(8)

NAME

installkernel - tool to script kernel installation

SYNOPSIS

installkernel <kernel-version> <bootimage> <mapfile>

DESCRIPTION

installkernel installs a new kernel image onto the system from the Linux source tree. It is called by the Linux kernel makefiles when make install is invoked there.

The new kernel is installed into {directory}/vmlinuz-{version}. If a symbolic link {directory}/vmlinuz already exists, it is refreshed by making a link from {directory}/vmlinuz to the new kernel, and the previously installed kernel is available as {directory}/vmlinuz.old.
