Red Hat Enterprise Linux Release 9.2 Manual Pages on 'libdrop_ambient.7' command

$ man libdrop_ambient.7

LIBDROP_AMBIENT(3)   Libcap-ng API   LIBDROP_AMBIENT(3)

NAME

   libdrop_ambient

DESCRIPTION

   This library can be used via LD_PRELOAD to force an application started

   with ambient capabilities to drop them. It leaves other capabilities

   intact. This can also be linked against and automatically does the

   right thing. You do not need to make any calls into the library because

   all the work is done in the constructor which runs before main() is

   called.
