## **Red Hat Enterprise Linux Release 9.2 Manual Pages on 'lookup\_dcookie.2' command**

### **\$ man lookup\_dcookie.2**

LOOKUP\_DCOOKIE(2)      Linux Programmer's Manual      LOOKUP\_DCOOKIE(2)

#### NAME

lookup\_dcookie - return a directory entry's path

#### SYNOPSIS

```
int lookup_dcookie(u64 cookie, char *buffer, size_t len);
```

#### DESCRIPTION

Look up the full path of the directory entry specified by the value cookie. The cookie is an opaque identifier uniquely identifying a particular directory entry. The buffer given is filled in with the full path of the directory entry.

For lookup\_dcookie() to return successfully, the kernel must still hold a cookie reference to the directory entry.

#### RETURN VALUE

On success, lookup\_dcookie() returns the length of the path string copied into the buffer. On error, -1 is returned, and errno is set appropriately.

#### ERRORS

EFAULT The buffer was not valid.

EINVAL The kernel has no registered cookie/directory entry mappings at the time of lookup, or the cookie does not refer to a valid directory entry.

#### ENAMETOOLONG

The name could not fit in the buffer.

ENOMEM The kernel could not allocate memory for the temporary buffer holding the path.

EPERM The process does not have the capability CAP\_SYS\_ADMIN required to look up cookie values.

ERANGE The buffer was not large enough to hold the path of the directory entry.

## VERSIONS

Available since Linux 2.5.43. The ENAMETOOLONG error return was added in 2.5.70.

## CONFORMING TO

lookup\_dcookie() is Linux-specific.

## NOTES

lookup\_dcookie() is a special-purpose system call, currently used only by the oprofile(1) profiler. It relies on a kernel driver to register cookies for directory entries.

The path returned may be suffixed by the string " (deleted)" if the directory entry has been removed.

## SEE ALSO

oprofile(1)

## COLOPHON

This page is part of release 5.10 of the Linux man-pages project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at <https://www.kernel.org/doc/man-pages/>.
