Red Hat Enterprise Linux Release 9.2 Manual Pages on 'named-nzd2nzf.8' command

\$ man named-nzd2nzf.8

NAMED-NZD2NZF(8) BIND 9 NAMED-NZD2NZF(8)

NAME

named-nzd2nzf - convert an NZD database to NZF text format

SYNOPSIS

named-nzd2nzf {filename}

DESCRIPTION

named-nzd2nzf converts an NZD database to NZF format and prints it to standard output. This can be used to review the configuration of zones that were added to named via rndc addzone. It can also be used to re-store the old file format when rolling back from a newer version of BIND to an older version.

ARGUMENTS

filename

This is the name of the .nzd file whose contents should be printed.
