NEXTUP(3) Linux Programmer's Manual NEXTUP(3)

NAME

nextup, nextupf, nextupl, nextdown, nextdownf, nextdownl - return next floating-point number toward positive/negative infinity

SYNOPSIS

```
#define _GNU_SOURCE    /* See feature_test_macros(7) */
```

```
#include <math.h>
```

```
double nextup(double x);
```

```
float nextupf(float x);
```

```
long double nextupl(long double x);
```

```
double nextdown(double x);
```

```
float nextdownf(float x);
```

```
long double nextdownl(long double x);
```

Link with -lm.

DESCRIPTION

The nextup(), nextupf(), and nextupl() functions return the next representable floating-point number greater than x.

If x is the smallest representable negative number in the corresponding type, these functions return -0. If x is 0, the returned value is the smallest representable positive number of the corresponding type.

If x is positive infinity, the returned value is positive infinity. If

x is negative infinity, the returned value is the largest representable finite negative number of the corresponding type.
