Red Hat Enterprise Linux Release 9.2 Manual Pages on 'nmtui-edit.1' command

$ man nmtui-edit.1

NMTUI(1)   General Commands Manual   NMTUI(1)

NAME

   nmtui - Text User Interface for controlling NetworkManager

SYNOPSIS

   nmtui-edit | nmtui edit {name | id}

   nmtui-connect | nmtui connect {name | uuid | device | SSID}

   nmtui-hostname | nmtui hostname

DESCRIPTION

   nmtui is a curses?based TUI application for interacting with

   NetworkManager. When starting nmtui, the user is prompted to choose the

   activity to perform unless it was specified as the first argument.

   The supported activities are:

   edit

      Show a connection editor that supports adding, modifying, viewing

      and deleting connections. It provides similar functionality as

      nm-connection-editor.

   connect

      Show a list of available connections, with the option to activate

      or deactivate them. It provides similar functionality as nm-applet.

   hostname

      Set the system hostname.

   Corresponding to above activities, nmtui also comes with binaries named

   nmtui-edit, nmtui-connect, and nmtui-hostname to skip the selection of

the activities.

SEE ALSO
