## **Red Hat Enterprise Linux Release 9.2 Manual Pages on 'npm-completion.1' command**

### **\$ man npm-completion.1**

NPM-COMPLETION(1)

NPM-COMPLETION(1)

#### NAME

npm-completion - Tab Completion for npm

#### Synopsis

npm completion

Note: This command is unaware of workspaces.

#### Description

Enables tab-completion in all npm commands.

The synopsis above loads the completions into your current shell.

Adding it to your ~/.bashrc or ~/.zshrc will make the completions available everywhere:

```
npm completion >> ~/.bashrc
```

```
npm completion >> ~/.zshrc
```

You may of course also pipe the output of npm completion to a file such as /usr/local/etc/bash\_completion.d/npm or /etc/bash\_completion.d/npm if you have a system that will read that file for you.

When COMP\_CWORD, COMP\_LINE, and COMP\_POINT are defined in the environment, npm completion acts in "plumbing mode", and outputs completions based on the arguments.
