Red Hat Enterprise Linux Release 9.2 Manual Pages on 'nvme-virtium-show-identify.1' command

\$ man nvme-virtium-show-identify.1

NVME-VIRTIUM-SHOW() NVME-VIRTIUM-SHOW()

NAME

nvme-virtium-show-identify - Show a complete detail of identify device information in json format.

SYNOPSIS

nvme virtium show-identify <device>

DESCRIPTION

This command prints complete detail of the identify device information.

The details include settings and description of each feature. The descriptions are based on NVM Express Revision 1.3c specification.

The <device> parameter is mandatory and may be either the NVMe character device (ex: /dev/nvme0), or a namespace block device (ex: /dev/nvme0n1).

On success, the command prints identify device in human readable format.

OPTIONS

none

EXAMPLES

? Show Identify Device:

```
# nvme virtium show-identify /dev/nvme0n1
```

NVME
